Recycling / *Tshebediso ya ntho hape*

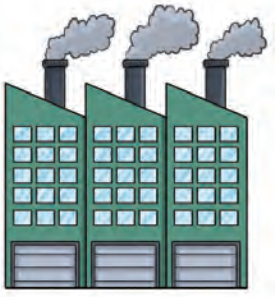
Recycle means that we **reuse** materials to manufacture (make) new products. This helps to **reduce** (make less) waste and pollution, which make the soil, water and air dirty.

Resaekele *e bolela hore* ***re boela re sebedisa*** *dintho ho etsa dintho tse ntjha. Hona ho thusa ho* ***fokotsa*** *tshenyo le tshilafatso tse etsang hore metsi, moya le mobu di silafale.*

Recyclable materials include tins, glass, paper and plastic. / *Disebediswa tse ka ntjhafatswang di kenyelletsa makotikoti, kgalase, pampiri le polasitiki.*

Separate the materials. / *Arola disebediswa.*

Transport of the materials takes place. / *Tsamaiso ya thepa ya etsahala.*



Manufacturing takes place. / *Ho etswa dihlahiswa.*

Now we have new products. / *Jwale re na le dihlahiswa tse ntjha.*

If we use recyclable materials to make products, we save raw materials, for example trees that are cut down to make paper. /
Ha re ka sebedisa dintho tse ka boelang di sebediswa hape, re boloka dintho tse sebediswang ho etsa dintho tse ding. Mohlala, difate tse kgaolwang ho etsa pampiri.

Technology and communication / *Thekenoloji le dikgokahanyo*

Long ago, people wrote letters and postcards when they wanted to communicate (talk) with others who were far away. Today we use technology for communication. Examples are cellphones, computers and television.

Kgalekgale, batho ba ne ba sebedisa mangolo le diposokarete ha ba ne ba batla ho buisana le ba bang ba hole le bona. Kajeno re sebedisa thekinoloji bakeng sa ho buisana. Mehlala ke mehalayathekeng, khomputa le theleveshene.
